Tectonic evolution of the Tibetan Plateau

Petr Yakovlev

Assistant Research Geologist
Montana Bureau of
Mines and Geology

**4PM, Thursday
January 12
NRB 128**

Petr is an Assistant Research Geologist, focusing on geologic mapping and the Cenozoic development of Montana. He recently received a PhD at the University of Michigan for his work on the Tibetan Plateau, which is the largest region of high topography in the world. His lecture will explain how he used geologic mapping, structural analysis, geomorphology, geochronology, and geochemistry to generate an integrated model for the development of the Indo-Asian orogen.

Visitor parking is available on the north side of the Natural Resources Building at the end of Park Street
