

Faculty Senate Agenda

March 22, 2022

- I. Welcome and Minutes (<https://www.mtech.edu/facultystaff/facultysenate/minutes/index.html>)

Approvals for February 22, 2022 Meeting Minutes

Action Items

- II. CRC Items: February and March Items: Attached to Outlook Calendar Invite
- III. Four Part Resolution to be Discuss and Acted Upon (see below)
- IV. Additional Resolution Regarding Budget Process at Montana Tech (see below)

Informational Items

- V. None at this time

Discussion Items

- VI. Faculty Senate Roster Updates
- VII. UM Affiliation
- VIII. Faculty Satisfaction Survey Team
- IX. LMS and Moodle
- X. BOR meeting
- XI. NWCCU Program Reviews
- XII. Spring All Faculty Meeting
- XIII. Future Meetings- Virtual or Live?

III. I submit the following four-part resolution to the Faculty Senate of Montana Technological University for their consideration and adoption at the next Faculty Senate meeting scheduled for March 22, 2022.

1. That the following AAUP statement on the governance of universities be adopted as Montana Technological University policy.
2. That the Faculty Senate of Montana Technological University be charged with developing and adopting any and all policies, procedures, rules and guidances necessary for executing this policy.
3. That henceforth all hiring announcements and job descriptions for senior administrative positions at Montana Tech contain a provision that the applicant must have a demonstrated commitment to fostering and promoting faculty governance and shared governance. This commitment to shared governance and faculty governance will be a major determining prerequisite for the successful applicant.
4. That promotion of faculty governance and shared governance be an evaluation criterion for all administrators at Montana Tech that interact with faculty.

It is time for the faculty of Montana Technological University to cease accepting a subservient position with regard to governance at Montana Technological University. It is time for the Faculty Senate of Montana Technological University to strongly demand a formalized role in decision making. The Faculty Senate needs to forcefully and unambiguously endorse shared governance that calls for partnership between administration and faculty, equity in the relationship between faculty and administration and accountability from the administration and the faculty.

The AAUP statement that follows presents a relatively mild policy on faculty governance. It should cause no concern or alarm from faculty. It is time that the Faculty Senate become proactive in promoting the interests of all faculty at Montana Technological University.

These resolutions are submitted pursuant to my earlier email of March 7 entitled Crisis at Tech which is to be made by extension part of this email.

Although there is no requirement that action items be submitted to the Faculty Senate at least 48 hours prior to a Faculty Senate meeting, this action item has forthwith been submitted well before any imaginary 48-hour deadline. Therefore, these action items should be part of the agenda for the March 22 Faculty Senate meeting.

Submitted by:

Professor John W. Ray

Senator, IAS Department

Statement on Government of Colleges and Universities—AAUP

The statement that follows is directed to governing board members, administrators, faculty members, students, and other persons in the belief that the colleges and universities of the United States have reached a stage calling for appropriately shared responsibility and cooperative action among the components of the academic institution. The statement is intended to foster constructive joint thought and action, both within the institutional structure and in protection of its integrity against improper intrusions.

It is not intended that the statement serve as a blueprint for governance on a specific campus or as a manual for the regulation of controversy among the components of an academic institution, although it is to be hoped that the principles asserted will lead to the correction of existing weaknesses and assist in the establishment of sound structures and procedures. The statement does not attempt to cover relations with those outside agencies that increasingly are controlling the resources and influencing the patterns of education in our institutions of higher learning: for example, the United States government, state legislatures, state commissions, interstate associations or compacts, and other interinstitutional arrangements. However, it is hoped that the statement will be helpful to these agencies in their consideration of educational matters.

Students are referred to in this statement as an institutional component coordinate in importance with trustees, administrators, and faculty. There is, however, no main section on students. The omission has two causes: (1) the changes now occurring in the status of American students have plainly outdistanced the analysis by the educational community, and an attempt to define the situation without thorough study might prove unfair to student interests, and (2) students do not in fact at present have a significant voice in the government of colleges and universities; it would be unseemly to obscure, by superficial equality of length of statement, what may be a serious lag entitled to separate and full confrontation.

The concern for student status felt by the organizations issuing this statement is embodied in a note, "On Student Status," intended to stimulate the educational community to turn its attention to an important need.

This statement was jointly formulated by the American Association of University Professors, the American Council on Education (ACE), and the Association of Governing Boards of Universities and Colleges (AGB). In October 1966, the board of directors of the ACE took action by which its council "recognizes the statement as a significant step forward in the clarification of the respective roles of governing boards, faculties, and administrations," and "commends it to the institutions which are members of the Council." The Council of the AAUP adopted the statement in October 1966, and the Fifty-third Annual Meeting endorsed it in April 1967. In November 1966, the executive committee of the AGB took action by which that organization also "recognizes the statement as a significant step forward in the clarification of the respective roles of governing boards, faculties, and administrations," and "commends it to the governing boards which are members of the Association." (In April 1990, the Council of the AAUP adopted several changes in language in order to remove gender-specific references from the original text.)

1. Introduction

This statement is a call to mutual understanding regarding the government of colleges and universities. Understanding, based on community of interest and producing joint effort, is essential for at least three reasons. First, the academic institution, public or private, often has become less autonomous; buildings, research, and student tuition are supported by funds over which the college or university exercises a diminishing control. Legislative and executive governmental authorities, at all levels, play a part in the making of important decisions in academic policy. If these voices and forces are to be successfully heard and integrated, the academic institution must be in a position to meet them with its own generally unified view. Second, regard for the welfare of the institution remains important despite the mobility and interchange of scholars. Third, a college or university in which all the components are aware of their interdependence, of the

usefulness of communication among themselves, and of the force of joint action will enjoy increased capacity to solve educational problems.

2. The Academic Institution: Joint Effort

a. Preliminary Considerations

The variety and complexity of the tasks performed by institutions of higher education produce an inescapable interdependence among governing board, administration, faculty, students, and others. The relationship calls for adequate communication among these components, and full opportunity for appropriate joint planning and effort.

Joint effort in an academic institution will take a variety of forms appropriate to the kinds of situations encountered. In some instances, an initial exploration or recommendation will be made by the president with consideration by the faculty at a later stage; in other instances, a first and essentially definitive recommendation will be made by the faculty, subject to the endorsement of the president and the governing board. In still others, a substantive contribution can be made when student leaders are responsibly involved in the process. Although the variety of such approaches may be wide, at least two general conclusions regarding joint effort seem clearly warranted: (1) important areas of action involve at one time or another the initiating capacity and decision-making participation of all the institutional components, and (2) differences in the weight of each voice, from one point to the next, should be determined by reference to the responsibility of each component for the particular matter at hand, as developed hereinafter.

b. Determination of General Educational Policy

The general educational policy, i.e., the objectives of an institution and the nature, range, and pace of its efforts, is shaped by the institutional charter or by law, by tradition and historical development, by the present needs of the community of the institution, and by the professional aspirations and standards of those directly involved in its work. Every board will wish to go beyond its formal trustee obligation to conserve the accomplishment of the past and to engage seriously with the future; every faculty will seek to conduct an operation worthy of scholarly standards of learning; every administrative officer will strive to meet his or her charge and to attain the goals of the institution. The interests of all are coordinate and related, and unilateral effort can lead to confusion or conflict. Essential to a solution is a reasonably explicit statement on general educational policy. Operating responsibility and authority, and procedures for continuing review, should be clearly defined in official regulations.

When an educational goal has been established, it becomes the responsibility primarily of the faculty to determine the appropriate curriculum and procedures of student instruction.

Special considerations may require particular accommodations: (1) a publicly supported institution may be regulated by statutory provisions, and (2) a church-controlled institution may be limited by its charter or bylaws. When such external requirements influence course content and the manner of instruction or research, they impair the educational effectiveness of the institution.

Such matters as major changes in the size or composition of the student body and the relative emphasis to be given to the various elements of the educational and research program should involve participation of governing board, administration, and faculty prior to final decision.

c. Internal Operations of the Institution

The framing and execution of long-range plans, one of the most important aspects of institutional responsibility, should be a central and continuing concern in the academic community.

Effective planning demands that the broadest possible exchange of information and opinion should be the rule for communication among the components of a college or university. The channels of communication should

be established and maintained by joint endeavor. Distinction should be observed between the institutional system of communication and the system of responsibility for the making of decisions.

A second area calling for joint effort in internal operation is that of decisions regarding existing or prospective physical resources. The board, president, and faculty should all seek agreement on basic decisions regarding buildings and other facilities to be used in the educational work of the institution.

A third area is budgeting. The allocation of resources among competing demands is central in the formal responsibility of the governing board, in the administrative authority of the president, and in the educational function of the faculty. Each component should therefore have a voice in the determination of short- and long-range priorities, and each should receive appropriate analyses of past budgetary experience, reports on current budgets and expenditures, and short- and long-range budgetary projections. The function of each component in budgetary matters should be understood by all; the allocation of authority will determine the flow of information and the scope of participation in decisions.

Joint effort of a most critical kind must be taken when an institution chooses a new president. The selection of a chief administrative officer should follow upon a cooperative search by the governing board and the faculty, taking into consideration the opinions of others who are appropriately interested. The president should be equally qualified to serve both as the executive officer of the governing board and as the chief academic officer of the institution and the faculty. The president's dual role requires an ability to interpret to board and faculty the educational views and concepts of institutional government of the other. The president should have the confidence of the board and the faculty.

The selection of academic deans and other chief academic officers should be the responsibility of the president with the advice of, and in consultation with, the appropriate faculty.

Determinations of faculty status, normally based on the recommendations of the faculty groups involved, are discussed in Part 5 of this statement; but it should here be noted that the building of a strong faculty requires careful joint effort in such actions as staff selection and promotion and the granting of tenure. Joint action should also govern dismissals; the applicable principles and procedures in these matters are well established.¹

d. External Relations of the Institution

Anyone—a member of the governing board, the president or other member of the administration, a member of the faculty, or a member of the student body or the alumni—affects the institution when speaking of it in public. An individual who speaks unofficially should so indicate. An individual who speaks officially for the institution, the board, the administration, the faculty, or the student body should be guided by established policy.

It should be noted that only the board speaks legally for the whole institution, although it may delegate responsibility to an agent. The right of a board member, an administrative officer, a faculty member, or a student to speak on general educational questions or about the administration and operations of the individual's own institution is a part of that person's right as a citizen and should not be abridged by the institution.² There exist, of course, legal bounds relating to defamation of character, and there are questions of propriety.

3. The Academic Institution: The Governing Board

The governing board has a special obligation to ensure that the history of the college or university shall serve as a prelude and inspiration to the future. The board helps relate the institution to its chief community: for example, the community college to serve the educational needs of a defined population area or group, the church-controlled college to be cognizant of the announced position of its denomination, and the comprehensive university to discharge the many duties and to accept the appropriate new challenges which are its concern at the several levels of higher education.

The governing board of an institution of higher education in the United States operates, with few exceptions, as the final institutional authority. Private institutions are established by charters; public institutions are established by constitutional or statutory provisions. In private institutions the board is frequently self-perpetuating; in public colleges and universities the present membership of a board may be asked to suggest candidates for appointment. As a whole and individually, when the governing board confronts the problem of succession, serious attention should be given to obtaining properly qualified persons. Where public law calls for election of governing board members, means should be found to ensure the nomination of fully suited persons, and the electorate should be informed of the relevant criteria for board membership.

Since the membership of the board may embrace both individual and collective competence of recognized weight, its advice or help may be sought through established channels by other components of the academic community. The governing board of an institution of higher education, while maintaining a general overview, entrusts the conduct of administration to the administrative officers—the president and the deans—and the conduct of teaching and research to the faculty. The board should undertake appropriate self-limitation.

One of the governing board's important tasks is to ensure the publication of codified statements that define the overall policies and procedures of the institution under its jurisdiction.

The board plays a central role in relating the likely needs of the future to predictable resources; it has the responsibility for husbanding the endowment; it is responsible for obtaining needed capital and operating funds; and in the broadest sense of the term it should pay attention to personnel policy. In order to fulfill these duties, the board should be aided by, and may insist upon, the development of long-range planning by the administration and faculty. When ignorance or ill will threatens the institution or any part of it, the governing board must be available for support. In grave crises it will be expected to serve as a champion. Although the action to be taken by it will usually be on behalf of the president, the faculty, or the student body, the board should make clear that the protection it offers to an individual or a group is, in fact, a fundamental defense of the vested interests of society in the educational institution.³

4. The Academic Institution: The President

The president, as the chief executive officer of an institution of higher education, is measured largely by his or her capacity for institutional leadership. The president shares responsibility for the definition and attainment of goals, for administrative action, and for operating the communications system that links the components of the academic community. The president represents the institution to its many publics. The president's leadership role is supported by delegated authority from the board and faculty.

As the chief planning officer of an institution, the president has a special obligation to innovate and initiate. The degree to which a president can envision new horizons for the institution, and can persuade others to see them and to work toward them, will often constitute the chief measure of the president's administration.

The president must at times, with or without support, infuse new life into a department; relatedly, the president may at times be required, working within the concept of tenure, to solve problems of obsolescence. The president will necessarily utilize the judgments of the faculty but may also, in the interest of academic standards, seek outside evaluations by scholars of acknowledged competence.

It is the duty of the president to see to it that the standards and procedures in operational use within the college or university conform to the policy established by the governing board and to the standards of sound academic practice. It is also incumbent on the president to ensure that faculty views, including dissenting views, are presented to the board in those areas and on those issues where responsibilities are shared. Similarly, the faculty should be informed of the views of the board and the administration on like issues.

The president is largely responsible for the maintenance of existing institutional resources and the creation of new resources; has ultimate managerial responsibility for a large area of nonacademic activities; is responsible for public understanding; and by the nature of the office is the chief person who speaks for the institution. In these and other areas the president's work is to plan, to organize, to direct, and to represent. The presidential function should receive the general support of board and faculty.

5. The Academic Institution: The Faculty

The faculty has primary responsibility for such fundamental areas as curriculum, subject matter and methods of instruction, research, faculty status, and those aspects of student life which relate to the educational process.⁴ On these matters the power of review or final decision lodged in the governing board or delegated by it to the president should be exercised adversely only in exceptional circumstances, and for reasons communicated to the faculty. It is desirable that the faculty should, following such communication, have opportunity for further consideration and further transmittal of its views to the president or board. Budgets, personnel limitations, the time element, and the policies of other groups, bodies, and agencies having jurisdiction over the institution may set limits to realization of faculty advice.

The faculty sets the requirements for the degrees offered in course, determines when the requirements have been met, and authorizes the president and board to grant the degrees thus achieved.

Faculty status and related matters are primarily a faculty responsibility; this area includes appointments, reappointments, decisions not to reappoint, promotions, the granting of tenure, and dismissal. The primary responsibility of the faculty for such matters is based upon the fact that its judgment is central to general educational policy. Furthermore, scholars in a particular field or activity have the chief competence for judging the work of their colleagues; in such competence it is implicit that responsibility exists for both adverse and favorable judgments. Likewise, there is the more general competence of experienced faculty personnel committees having a broader charge. Determinations in these matters should first be by faculty action through established procedures, reviewed by the chief academic officers with the concurrence of the board. The governing board and president should, on questions of faculty status, as in other matters where the faculty has primary responsibility, concur with the faculty judgment except in rare instances and for compelling reasons which should be stated in detail.

The faculty should actively participate in the determination of policies and procedures governing salary increases.

The chair or head of a department, who serves as the chief representative of the department within an institution, should be selected either by departmental election or by appointment following consultation with members of the department and of related departments; appointments should normally be in conformity with department members' judgment. The chair or department head should not have tenure in office; tenure as a faculty member is a matter of separate right. The chair or head should serve for a stated term but without prejudice to reelection or to reappointment by procedures that involve appropriate faculty consultation. Board, administration, and faculty should all bear in mind that the department chair or head has a special obligation to build a department strong in scholarship and teaching capacity.

Agencies for faculty participation in the government of the college or university should be established at each level where faculty responsibility is present. An agency should exist for the presentation of the views of the whole faculty. The structure and procedures for faculty participation should be designed, approved, and established by joint action of the components of the institution. Faculty representatives should be selected by the faculty according to procedures determined by the faculty.⁵

The agencies may consist of meetings of all faculty members of a department, school, college, division, or university system, or may take the form of faculty-elected executive committees in departments and schools and a faculty-elected senate or council for larger divisions or the institution as a whole.

The means of communication among the faculty, administration, and governing board now in use include: (1) circulation of memoranda and reports by board committees, the administration, and faculty committees; (2) joint ad hoc committees; (3) standing liaison committees; (4) membership of faculty members on administrative bodies; and (5) membership of faculty members on governing boards. Whatever the channels of communication, they should be clearly understood and observed.

IV.

I request that pursuant to Professor Scott Risser's email of March 21, an additional action item be added to the action agenda of today's Faculty Senate meeting. That resolution would ask the administration of Montana Technological University to provide (1) a *detailed plan to balance our budget if (when) increases in enrollment do not materialize*. That plan would also (2) provide information as to how the administration would prioritize *academic programs for our students in the face of this multi-million-dollar cliff, and not use non-strategic ubiquitous cuts*. Professor Risser goes on to say: *It is evident that there are structural problems with our current budget and staffing model, and leadership must openly identify and immediately work to remedy them*. Part of the administration plan for coping with this financial crisis that would be submitted would be (3) providing a clear action, work plan for addressing the budget crisis and remedying the current structural problems associated with the present budget and staffing model.

This issue reinforces that urgent need for the Faculty Senate of Montana Technological University to embrace a leadership role in promoting faculty governance and shared governance at Montana Technological University. It may be that the administration has no idea how to address this crisis, which would indicate the need for full collaboration with the faculty. Budget decisions are the apex of the political/power process and administrations are often reluctant to share power. But the crisis Tech is facing is too urgent for business as usual. There is a wealth of expertise in the Montana Tech faculty and this expertise should inform and shape budget decisions going forward. Of course, such action as proposed for today's meeting would get the Senate out of its comfort zone of dealing with the tried-and-true issues that are on every agenda. But we face a crisis that demands bold action. Continuing to do things as we always do will not work at this stage of events.

(In terms of adding this additional action item, I would remind the senate that according to our parliamentary authority, *Robert's Rules of Order NR*, action items can be added as late as the actual meeting itself. So, there should be no problem adding this for today's meeting. I would argue that the issues dealing with Tech's financial crisis are the most pressing on today's agenda.)

Professor John W. Ray

IAS Department Senator

Dear Faculty Senators,

Whereas I appreciate the resolution proposed by Dr. Ray, especially those aspects ensuring future shared governance and evaluation of administrators, there is an immediate financial crisis at Montana Tech, and frankly there seems to be no real plan or strategy to address this crisis being communicated by leadership.

Numerous examples of poor communication and poorer budgeting (e.g. <https://www.chronicle.com/article/the-money-pit> & <https://www.chronicle.com/article/how-can-you-tell-when-a-college-is-circling-the-drain/>) herald the dangers of not holding leadership accountable for their decisions or opacity.

As the voice of the faculty, the senate must demand a clear plan to deal with the impending structural deficit. Leadership must explain how they plan to balance our budget if (when) *increases in enrollment do not materialize*. Leadership must provide a strategy for this *academic* institution that clearly prioritizes *academic* programs for our students in the face of this multi-million-dollar cliff, and not use non-strategic ubiquitous cuts. It is evident that there are structural problems with our current budget and staffing model, and leadership must openly identify and immediately work to remedy them.

I don't want this crisis and its fallout to be the subject of a front-page Chronical article. I don't want to lose confidence and trust for Montana Tech leadership. I don't want to see students leave Tech because their academic programs disappeared in a flurry of non-strategic cuts.

As a faculty member, I request that the senate pose these and other questions concerning this budget shortfall to the Chancellor and decide upon a date by which to require his response.

Thank you,

sdr
