# WEB DEVELOPMENT AND ADMINISTRATION

WHAT IS WEB DEVELOPMENT

The AAS Web Development and Administration degree provides skills in one of the most popular and profitable industries today. Web Development is creating, designing, and editing new or existing web sites. Web Developers are usually responsible for making web pages visually appealing, functional, and interactive. After a site is successfully created, administration involves setting up a web server, installing and maintaining server-side software to house the site, and allow for retrieval, monitoring, and testing of the site pages.

The Web Development and Administration degree teaches students to utilize current and emerging web development tools. The degree prepares technicians who are knowledgeable in computer and network support and can create and manage an organization's web presence. The degree is unique in that it has a significant focus on the organization and management aspects of websites and web page creation and design. Students can complete the degree in two years. Graduates of the program perfect skills that include web server administration, web design and development, web functionality, graphic design, and e-commerce.

WHAT TYPE OF SKILLS DO YOU NEED?

- Interest in computers
- You like solving problems
- Insatiable curiosity—how do computer networks work?
- You like working with your hands

WHAT CAN YOU DO WITH YOUR DEGREE?

As many industries transition to web-based technologies, web site design, web site programming, and web site administration are some of the fastest growing occupations in the world. This program will launch students on a lucrative career path with such professional options as web programmer, web developer consultant, and e-commerce manager, to name a few. Many graduates have the option to work remotely from home and others choose to open their own business offering web services.
